

OSHA Safety Seminars: Confined Space - includes Lockout/Tagout (LOTO)

This seminar is tailored for contractors, manufacturing companies, field engineers and other individuals in the construction industry who are exposed to work in confined spaces. The hazards encountered and associated with entering and working in confined spaces are capable of causing bodily injury, illness, and death to the worker. Accidents occur among workers because of failure to recognize that a confined space is a potential hazard. It should therefore be considered that the most unfavorable situation exists in every case and that the danger of explosion, poisoning, and asphyxiation will be present at the onset of entry.

This seminar also covers Lockout Tagout (LOTO) standards. The LOTO standard identifies the practices and procedures necessary to shut down and lock out or tag out machines and equipment, requires that employees receive training in their role in the lockout/tagout program, and mandates that periodic inspections be conducted to maintain or enhance the energy control program.

Confined Space Topics:

- General Industry and Construction exposure are reviewed
- Safety standards and subcontractors
- Physical and environmental hazards
- Permit requirements and procedures
- Development or revision of internal training program
- Confined Space access and egress
- Use of gas monitoring devices

Hazardous conditions covered in the discussion include: Hazardous Atmospheres (flammable, toxic, irritant, and asphyxiating), and General Safety Hazards (mechanical, communications, entry and exit, and physical). Weather permitting, an extraction exercise is demonstrated on-site using company personnel and equipment to visually enhance the classroom lecture.

Dates/Location: Per client's request

Course Duration: ** 7 Hours (1 Day)

Instructors: Edwin C. Weaver, P.E.
Roberto A. Nuñez, P.E.

**Course Duration includes breaks. Actual contact hours will vary and will be properly reflected when certificates are awarded.
